Introduction To Metal-Ceramic Technology

Synopsis

This completely revised and updated edition presents the theory and technical procedures for physically constructing an esthetic metal-ceramic restoration using contemporary dental porcelain systems. Readers are introduced to the complex technical language of this technology as they are patiently guided through each step of the process. New to this edition is an increased emphasis on evidence-based documentation; information on biocompatibility, including indications of intra- and extraoral allergic responses; explanations of the rationale for variations in substructure design; expanded dental materials content; updated dental porcelain and dental alloy classifications; firing schedules for current products; and much more. Written specifically for dental technology students, dental students, graduate students and residents in advanced education programs, and advanced technical courses.

Contents

1. History and Overview
2. Chemistry of Dental Porcelain
3. Casting Alloys for Bonding to Dental Porcelain
4. Essentials of Metal-Ceramic Substructure Design
5. Fundamentals of Spruing, Investing, and Casting
6. How Does Dental Porcelain Bond to Metal?
7. Preparation of the Metal Substructure for Porcelain
8. Applying Porcelain to the Metal Substructure
9. Adjusting and Finishing the Metal-Ceramic Restoration

Customer Reviews

Best book out there on Metal-Ceramic dental restorations. Very clearly written and excellent photos and graphics. Very highly recommended for all techs and dentists interested in Metal/Ceramic restorations.

Many thanks to Mr. Naylor, for the revised edition of one of the best written resources of modern dentistry. It is really a basic handbook for dental technician, dentist and dental student. Easy to understand, fluent in writing and lots of figures...Should be a reference for the ones who are interested in fixed prosthesis.

thank you

An older book yet still good
