Customer Reviews

This is a nice book and it is written in the typical un-pretentious Princeton Review voice that aims to help the average person. I appreciate that because it feels like the authors are in my corner, hoping for me to do well. My situation is probably fairly common to those preparing for the GMAT: 31 years old and out of school for 8 or 9 years. With that in mind, here are the things I found most helpful:*

Math review of basic terms and formulas - This book does a really good job in limiting its scope to

those things that appear frequently on the test. For example, in a right triangle, if the short side is x , the longer side is $x\sqrt{3}$, and the hypotenuse is $2x$. There are many simple things like this from algebra or geometry that I had completely forgotten. Almost all of them showed up on the actual test.* Sentence correction - I have an English degree and do a lot of writing professionally.

However, the GMAT sentence correction is a different animal, so don't automatically assume you've got that nailed. But there are really only 8 grammatical errors that appear on the GMAT, and this book will walk you through spotting each one.* Test-taking strategies - Process of elimination and "plugging in" are two strategies in particular that this book does a good job teaching. Even if you know how to do a problem, utilizing these strategies can help you do it faster. This is important on the GMAT, as you'll be battling the clock. Limitations: This book does not do a deep-dive on any section. It has a nice overview, but keeps it basic. It also (fairly) assumes that you know a certain degree about English and Math. If you need extra help in either area, you'll need to look to supplemental sources.
