Customer Reviews

This book â œBook On Space: Asteroids and Meteorsâ • belongs to a Childrenâ ™s Books series published by Speedy Publishing. We love Speedy Publishing Childrenâ ™s book series as they usually come with excellent photos and basic references that are quite suitable for the underage, for those small family members at home, for those parents who love to teach their children at home and this type of books serve well for teaching purposes at school too. This book refers to Asteroids which are small Solar System bodies that orbit the Sun; they are also left over materials from the formation of the Solar System. Asteroids vary greatly in size, weight and are very rich in various metal structures. This book also refers to a meteoroid which is the one that burns up as it passes through the Earthâ ™s atmosphere and it is known as Meteor. With beautiful photographs and short

references about Asteroids and Meteors which are depicted on this book in high definition (full color) photographs. As this book has beautiful, full colored, high detailed, photographs/pictures you may want to share with your kids and/or students as they can serve as point for further discussions or a way to develop language skill by promoting the children to express themselves about what they see and understand by looking at the photograph or picture. Disclosure: I received this product on a promotional discount for my honest review and they are 100% my own opinions; of course, I do understand that your own opinion may differ from mine and I do respect that in any way. I haven't received any kind of compensation and I am not required to give a good review. I am also not associated with the seller in any way.

This book, as the title suggests, only covers two topics, asteroids and meteors. Like other Baby Professor books this book is heavy on pictures and light on text. While other Baby Professor books are enhanced by the extra textless images, this book suffered from it because the images were practically a repeat of what has already been shown. The transition from the very first statement of the book into the discussion of asteroids was extremely clumsy, by mentioning that the Earth is bombarded with tons of dust and sand sized particles, but then immediately moves into the definition of an asteroid. It is unclear to the reader who doesn't know about this topic if those sand sized particles are asteroids or something else. There is no definition, it was just out of place and could have been written better. When the book moves into talking about meteors and meteoroids there is again no transition. On one page they are talking about asteroids, then immediately on the next page it's talking about a meteoroid that burns up in the atmosphere is a meteor. There is no definition of what a meteoroid is for those who don't know. I had to scroll back to make sure I hadn't missed a page. A meteoroid is never defined in the book and a meteor isn't defined other than saying it's a meteoroid that burns up in the atmosphere. This book is written in a style that would be ideal for a preschooler or kindergartener but the language used is more suitable for a first or second grader. With that said, the flow and lack of information made the book difficult to read and understand, which makes it less than ideal for children, who are the intended audience. Like other Baby Professor books, this one suffers from a lack of information, formatting issues, and basic comprehension flow.
